- (b) (a) is true but (r) is NOT the correct reason for (a)
- (c) Both (a) and (r) are true and (r) is the correct reason for (a)
- (d) Both (a) and (r) are false
- **18.** In acetate mevalonate pathway geranyl pyrophosphate leads to formation of monoterpenes, the major constituents of volatile oils.
 - [P] Geranyl pyrophosphate contains two isoprene units
 - [O] Monoterpenes have 15 carbon atoms
 - [R] The two isoprene units condense in head to tail fashion to give Monoterpenes
 - [S] Isoprene unit has molecular formula of C 5 H 5. which one of the given statements is correct?
 - (a) P is true. Q is false, R is true, S is false
 - (b) P is false. Q is true, R is true, S is false
 - (c) P is true. Q is true, R is fa1se, S is true
 - (d) P is true. Q is false, R is true, S is true
- **19.** Two genetic types of Cannabis i.e. drug type and Hemp types are cultivated.
 - [P] Drug type cannabis is rich in (-)(-)A-trans-tetrahydrocannabinol
 - [Q] Hemp type cannabis is rich in cannabidiol
 - [R] Drug type cannabis is rich in cannabidiol
 - [S] Hemp type cannabis contains elongated bast fibres which one of the given statements is correct?
 - (a) P is true, Q is true, R is true, S is true
 - (b) P is true, Q is false, R is false, S is true
 - (c) P is true, Q is true, R is false. S is true
 - (d) P is false, Q is false, R is true, S is false
- 20. Each of the following options lists a phytoconstituent, its phytochemical grouping, pharmacological activity and corresponding semisynthetic analogue. Find a MISMATCHING option
 - (a) Podophyllotoxin, lignan, anticancer, etoposide
 - (b) Sennoside, anthraquinone, laxative, sinigrin
 - (c) Atropine, alkaloid, anticholinergic, homatropine
 - (d) THC, terpenophenolic, psychoactive, nabilone
- **21.** Inhibition/induction of which of the following Cytochrome P450 enzyme system is most likely to be involved in important drug-drug interactions

(a) CYP3A4

- (b) CYP2D6
- (c) CYP2C9
- (d) CYP1A2
- **22.** Which of the following mechanisms is NOT related to platelet aggregation inhibitory action
 - (a) ADP receptor antagonism
- (b) Glycoprotein IIb/IIIa receptor antagonism
- (c) Phosphodiesterase inhibition
- (d) Prostacyclin inhibition
- **23.** Choose the correct statement about the given four diseases?

[R] Myastheniagravis [S] ulcerativecolitis (a) Q&S are autoimmune disorders (b) P & Q are autoimmune disorders (c) P & P are not autoimmune disorders (d) P & S are not autoimmune disorders	
(c) P & R are not autoimmune disorders (d) R & S are not autoimmune disorders 24. Which of the following species is being inactivated by the enzyme Dipeptidyl Peptidase-4 (a) Oxytocin (b) vasopressin (c) Incretins (d) Glucagon	
25. Patients taking isosorbide mononitrate or nitroglycerine should be advised not to take Sildena	ıfil.
This drug- drug interaction causes which of the following actions (a) Respiratory failure (b) Severe hypotension (c) Prolongation of QT interval (d) Myocardial ischemia	
26. Which of the following drugs does NOT induce mydriasis? (a) Atropine (b) Ephedrine (c) Phentolamine (d) Cocaine	
27. Which of the following statements is TRUE for angiotensin-II (a) Causes myocyte hypertrophy (b) Decreases the action of sympathetic nervous system (c) Increases force of myocardial contraction (d) Decreases the synthesis and release of aldosterone	
28. Which of the following beta blockers has been shown clinically to reduce mortality in patients symptomatic heart failure (a) Atenolol (b) Carvedilol (c) Propranolol (d) Esmolol	of
29. All of the given four drugs cause vasodilatation. Choose the correct statement about them. [P] Bradykinin [Q] Minoxidil [R] Acetylcholine [S] Hydralazine (a) P & Q cause release of nitric oxide (b) Q & R do not cause release of nitric oxide (c) R & S cause re1ease of nitric oxide (d) P & S do not cause release of nitric oxide	
30. Rhabdomyolysis is the side effect associated with which of the following classes of drugs (a) ACE inhibitors (b) Statins (c) Calcium channel blockers (d) Sodium channel blockers	
31. Blood level monitoring of HbA1c is important in which of the given diseased states (a) Hypercholesterolemia (b) Diabetes mellitus (c) Myocardial infarction (d) Congestive heart failure	
32. Most of the emergency contraceptives have which one of the following active ingredients (a) Estradiol (b) Norethindron (c) Misoprostol (d) Levonorgesterol	

33. Which of the following and possesses post-antibiotic e	effect							
(a) Ceftazidime (b)) Azithromycin	(c) Amikacin	(d) Piperacillin					
34. Antiretroviral Raltegravir is unique, because of which of its following actions (a) Integrase inhibition (b) CCR5 Co-receptor antagonism (c) Fusion inhibition (d) Reverse transcriptase inhibition								
35. What is chemotaxis								
(a) Toxicity of chemicals	(h) '	Taxonomy of chemicals						
(c) Inhibition of Inflammat		Movement of leucocytes in	<mark>ı inflam</mark> mation					
36. Which one of the following			receptor?					
(a) Muscarinic ch <mark>o</mark> linergic (c) Nicotinic cho <mark>l</mark> inergic re	-	(b) Alpha adrenoceptor (d) Beta adrenoceptor						
(c) Nicotinic chomiergic re	ceptor (u) beta aurenoceptor						
37. Which of the followings us modifier	sed in the treatm	n <mark>ent of rheumat</mark> oid arthrit	is is NO <mark>T a b</mark> iologic response					
(a) Anakinra (b)	Lefl <mark>unomid</mark> e	(c) E <mark>tanerc</mark> ept	(d) Inf <mark>lixim</mark> ab					
38. Which of the following statements is FALSE for artemisinin? (a) It is a sesquiterpene lactone endoperoxide (b) It is a drug of choice in prophylaxis of malaria (c) It does not cure relapsing malaria (d) It is useful in treatment of cerebral falciparum malaria								
39. Which of the followings is	a noncompetitivo	e inhibitor of the enzyme i	reverse transcriptase in HIV					
	o) Nevirapine		(d) Tenofovir					
40. Which of the followings is (a) Statins	the most effectiv (b) Niacin	re monotherapy for raising (c) Ezetimibe	g HDL cholesterol (d) ω-3-Fatty acids					
41. Which of the following par	rameters from pl	lasma concentration time	profile study gives indication					
of the rate of drug absorpt	ion?							
(a) C_{max} (b) T_{max}	l'max	(c) AUC	(d) $t_{1/2}$					
42. Which of the following pairs has high binding affinity for 5alpha -reductase (a) Letrozole and androstenedione (b) Finasteride and testolactone (c) Finasteride and 5-DHT (d) Finasteride and testosterone								
43. Which of the following ske	eletal muscle rela	exants acts directly on the	contractile mechanism of the					
muscle fibers								
(a) Pancuronium (b) Baclofen	(c) Dantrolene	(d) Chorzoxazone

 55. Which condition does not apply as per Indian law while conducting single dose bioavailability study of an immediate release product (a) Sampling period should be at least three t1/2 el (b) Sampling should represent pre-exposure, peak exposure and post-exposure phases (c) There should be at least four sampling points during elimination phase (d) Sampling should be continued till measured AUC is at least equal to 80% of AUC
56. Upon standing sometimes gel system shrinks a bit and little liquid is pressed out. What is this phenomenon, known as (a) Oozing (b) Syneresis (c) Shrinking (d) Desolvation
57. Which of the following routes of administration of drugs is associated with Phlebitis (a) Subcutaneous (b) Intravenous (c) Intraspinal (d) Intradural
58. Study the following two statements and choose the correct answer [P] Antibodies are serum proteins providing immunity. [Q] IgG provides immunity to new born babies while IgM is the first generated antibody. (a) P is correct and Q is incorrect (b) P is incorrect and Q is correct (c) Both P and Q are correct (d) Both P and Q are incorrect 59. Which microbe is used for validation of sterilization by filtration process (a) Bacillus stearothermophilus (b) Pseudomonas diminuta (c) Bacillus suhtilis (d) Pseudomonas aeruginosa 60. Non-linear pharmacokinetics can be expected due to [P] Enzyme induction [Q] Active secretion Choose the correct answer (a) Both P and Q are true (b) P is true, Q is false (c) Q is true. P is false (d) Both P and Q are false
61. Which wavelength of the UV light provides maximum germicidal action (a) 253.7 nm (b) 275.5 nm (c) 283.5 nm (d) 240.0 nm
62. Which of the following statements is INCORRECT (a) Chick Martin test uses organic matter in media (b) The organism in Rideal-walker test is S. typhi (c) Rideal-walker test uses organic matter in media (d) The organism in Chick Martin test is S. typhi

(a) Resonance forces

(b) Resonance and London dispersion forces

63. Which of the following forces contribute to stability of charge-transfer complexes

Face it | Fight it | Achieve it

(c) Dipole-dipole interactions and London dispersion forces

(d) Resonance forces and dipole-dipole interactions
64. Which of the following isotherms are produced when the heat of condensation of successive layers is more than the heat of adsorption of first layer (a) Type III and IV (b) Type II and V (c) Type I and III (d) Type III and V
65. Which of the followings act as a non-ionic emulsifying agent (a) Triethanolamine oleate (b) Polyoxyethylene sorbitan monooleate (c) N-Cetyl-N-ethylmorpholinium ethosulfate (d) Dioctyl sulphosuccinate
 66. The minimal effective flow rate of air in laminar flow hood should be not less than how man cubic feet per minute (a) 10 (b) 50 (c) 100 (d) 1000 67. Which of the following Schedules include shelf life of drugs (a) Schedule F (b) Schedule M (c) Schedule G (d) Schedule P
68. Which of the following pumps is used in handling of corrosive liquids (a) Turbine pump (b) volute pump (c) Air binding pump (d) Peristaltic pump
69. By addition of which of the followings the shells of soft gelatin capsules may be made elastic (a) Polyethylene glycol (b) Sorbitol (c) Propylene glycol (d) Dibutyl phthalate
70. Convert 90% v/v alcohol to Proof strength. Choose the correct answer. (a) 57.77° under proof (b) 57.77° over proof (c) 47.41° over proof (d) 47.41° under proof
71. Department of Transport Test (DOT) is performed for which of the followings (a) Strip packing (b) Aerosols (c) Injection packing (d) Glass containers
72. What is the Heat of vaporization of water at 100°C? (a) 2790 cal/mole (b) 7290 cal / mole (c) 7920 cal/mole (d) 9720 cal/mole
 73. Determine the correctness or otherwise of the following Assertion [a] and the Reason [r]: Assertion [a]: For a pharmaceutical powder true density is greater than the granule density. Reason[r]: Mercury displacement used for determining granule density, allows penetration of liquid into internal pores of the particles. (a) [a] is true but [r] is false (b) Both [a] and [r] are false (c) Both [a] and [r] are true and [r] is the correct reason for [a] (d) Both [a] and [r] are true but [r] is NOT the correct reason for [a]

Face it | Fight it | Achieve it

74. Determine the correctness or otherwise of the following statements:	74 . I	Determine the	correctness of	r otherwise	of the follo	wing statements:
--	---------------	---------------	----------------	-------------	--------------	------------------

- [P] Rheopexy is the phenomenon when a sol forms gel more readily when sheared gently.
- [Q] In a rheopectic system, sol is the equilibrium form.
- [R] Rheopexy is a phenomenon when a sol forms gel when the material is kept at rest.
- (a) [R] is true but [P] and [Q] are false (b) [P] is true but [Q] and [R] are false
- (c) [P], [Q] and [R], all are false
- (d) [P], [Q] and [R], all are true

75. Define Plasmapheresis Choose the correct answer

- (a) The process of collecting plasma and returning the red blood cells concentrate to the donor
- (b) The process of collecting red blood cells concentrate and returning the plasma to the donor
- (c) The process of separating whiteblood cells from blood
- (d) The process of generating artificial blood plasma expanders

76. Molecules in the smectic liquid crystals are characterized by which one of the followings

- (a) Mobility in three directions and rotation in one axis
- (b) Mobility in two directions and rotation in one axis
- (c) Mobility in two directions and no rotation
- (d) Mobility in three directions and no rotation

77. Choose the correct sequence of Moisture vapor Transmission Rate in packaging materials?

- (a) Paper > Aluminium foil > PvC > PvdC
- (b) Aluminium foil > PvC > PvdC > Paper
- (c) Aluminium foil > PvdC > PvC > Paper
- (d) Paper > PvC > PvdC > Aluminium foil
- **78.** How many mL of 50% (w/v) dextrose solution and how many mL of 5% (w/v) dextrose solution are required to prepare 4500 mL of a 10 (w/v) solution?
 - (a) 500 mL of 50% and 4000 mL of 5%
- (b) 1000 mL of 50% and 3500 mL of 5%
- (c) 4000 mL of 50% and 500 mL of 5%
- (d) 1500 mL of 50% and 3000 mL of 5%
- **79.** A drug is administered to a 65 Kg patient as 500 mg tablets every 4 hours. Half-1ife of the drug is 3 h, volume of distribution is 2 liter/Kg and oral bioavailability of the drug is 0.85.Calcu1ate the steady state concentration of the drug
 - (a) 5.05mcg/ml
- (b) 4.50 mcg/ml
- (c) 3.53 mcg/ml
- (d) 3.00 mcg/ml

80.P-Glycoprotein pump is responsible for which one of the followings

- (a) Transporting the drugs from the enterocytes into the gutlumen
- (b) Transporting the drugs from gut lumen into enterocytes
- (c) Transporting the drugs from oral mucosa into blood capillaries
- (d) Transporting the drugs from Peyer's patches into the gut lumen

- [P] Al +++ > Ba ++
- [R] $NH^+ > Na^+$

Choose the correct statement:

(a) Statement x is true but P, Q and R are false in Statement Y

(b) Statement x is false and P, Q and R are false in Statement Y(c) Statement x is true and Q and R are false in Statement Y(d) Statement x is false and P is fa1se in Statement
82. The first stage of wetting on addition of a granulating agent to the powders is characterized by which one of the followings? (a) Capillary state (b) Pandular state (c) Eurigular state (d) Proplet state
(a) Capillary state (b) Pendular state (c) Funicular state (d) Droplet state
83. Larger values of Ky in the Heckel Plot indicate formation of what quality of tablets? (a) Harder tablets (b) Softer tablets (c) Fluffy tablets (d) Brittle tablets
84. The degree of flocculation of a suspension is 1.5 and the sedimentation volume is 0.75. what wis be the ultimate volume of deflocculated suspension (a) 2.0 (b) 1.5 (c) 0.75 (d) 0.5
85. What will be the time required for a drug exhibiting first order rate constant of 4.6yhr to be degraded from initial concentration of 100 mg/m1 to 10 mg/ml? (a) 2 hr (b) 4hr (c) 9 hr (d) 0.5 hr
86. What will be the dose required maintaining therapeutic concentration of 20 microgram/m1 for 24 hr of a drug exhibiting total clearance of 2 L/hr? (a) 96 mg (b) 480 mg (c) 960 mg (d) 48 mg
87. What will be the urine to plasma ratio of a weakly acidic drug having pKa of 5? [urine (pH : 5) plasma (pH : 7)] (a) 1:101 (b) 1:201 (c) 2:101 (d) 1:202
88. The Reynolds number widely used to classify flow behavior of fluids is the ratio of which one of the followings: (a) Inertial forces to gravitational forces (b) Inertial forces to viscous forces (c) Viscous forces to inertial forces (d) viscous forces to gravitational forces
89. If the distillation graph using McCabe Thiele method is parallel to x-axis, then the feed is which one of the followings? (a) Saturated liquid Superheated vapor (b) Saturated vapor (c) Superheated liquid Superheated vapor
90. What for the baffles are provided in a shell and tube heat exchanger? (a) To increase turbulence (b) To decrease turbulence (c) To prevent corrosion (d) To increase shell side passes
91. SOS means which one of the followings (a) Take occasionally (b) Take immediately (c) Take when necessary (d) Take as directed

92. Which statement is FALSE for Association Colloids

PHARMACY INDIA

Face it | Fight it | Achieve it

(a) They are also c(c) They show par	alled amphiphiles tial solvation	(b) They contair (d) They are also	n aggregated molecules o called micelles

101. A	tooth	paste	contains	stannous	fluoride	and	calcium	pyrophosphate	along	with	other
fori	nulatio	n									

constituents. Choose the correct statement out of the followings?

- (a) Stannous fluoride is an anticaries agent while calcium pyrophosphate is a dentifrice
- (b) Stannous fluoride is a dentifrice while calcium pyrophosphate is a desensitizing agent
- (c) Stannous fluoride is a desensitizing agent while calcium pyrophosphate is an anticaries agent
- (d) Both are dentifrices while calcium pyrophosphate is additionally a desensitizing agent
- **102.** Hydrogen peroxide solution (20 volumes) is used topically as a mild antiseptic. It is mainly used

cleaning of wounds which could be due to some of the following actions of hydrogen peroxide.

- [P] Astringent action
- [Q] Nascent hydrogen releasing action
- [R] Oxidizing action
- [S] Mechanical cleansing action Choose the correct statements for the use of hydrogen peroxide as cleaning agent for wounds
- (a) P&R
- (b) P&O
- (c) R&Q
- (d) R&S

103. Magnesium trisilicate is considered to be a better antacid than aluminium hydroxide due to its following

additional properties:

- [P] It has a fixed chemical composition
- [Q] It forms colloidal silicone dioxide
- [R] Magnesium ions overcome constipation
- [S] Magnesium ions cause higher inhibition of pepsin than aluminium ions Choose the correct combination of statements
- (a) Q&S
- (b) R&S
- (c) P&Q
- (d) Q&R

104. Boric acid is a weak acid (pKa 9.19) which cannot be titrated with a standard solution of sodium hydroxide using phenolphthalein as indicator. This titration becomes possible on addition of glycerol due to one of the following reactions. Choose the correct reaction

- (a) Boric acid becomes boronic acid on reaction with glycerol
- (b) Boric acid gives a monoprotic tetravalent boron ester with glycerol
- (c) Boric acid gives a tribasic acid on reaction with glycerol
- (d) Two boric acid molecules combine to give an anhydride in presence of glycerol

105. An iron compound used as heamatinic agent must meet two requirements i.e. it should be biologically available and be non-irritating. Which one of the following compounds meet the above two requirements most closely

(a) Ferric chloride

- (b) Ferric ammonium sulphate
- (c) Ferric ammonium citrate
- (d) Ferrous thioglycollate

106. Iodine-131 as sodium iodide solution is used as a radiopharmaceutical for diagnostic and therapeutic purposes. Its usage is dependent on the release of the following emissions:

[P] Alpha particles

[R] Beta emission

(a) R&S

[Q] Positrons

(c) P&R

107. Arrange the following Lowry-Bronsted acids into their decreasing order of acidity (highest to

(b) Q&S

113.In nucleophilic aliphatic substitution reactions arrange the following leaving groups in decreasing order of their leaving capacity?

[P] Brosvl

[Q] Hydroxyl

[R] Chloro

[S] Mesyl

(a) S > R > P > Q

(b) P > S > R > Q

(c) R>Q>S>P

(d) R>S>Q>P

- **114.** Determine the correctness or otherwise of the following Assertion [a] and the Reason [r]:
 - **Assertion (a):** Quaternary ammonium phase transfer catalysts can enhance the rate of nucleophilic aliphatic substitution reactions in biphasic systems with water soluble nucleophiles.
 - **Reason (r):** Quaternary ammonium compounds are highly polar, positively charged water soluble compounds.
 - (a) Both (a) and (r) are true but (r) is not the correct reason for (a)
 - (b) Both (a) and (r) are true and (r) is the correct reason for (a)
 - (c) (a) is true (r) is false
 - (d) Both (a) and (r) are false
- 115. Which one of the given compounds can be used as primary standard for standardization of perchloric acid in non-aqueous titrations?

(a) Potassium hydrogen phthalate

(b) Sodium bicarbonate

(c) Potassium dihydrogen phosphate

(d) Sodium methoxide

- **116.** In context of complexometry (complexometric titrations), the two terms labile and inert complexes, are used frequently. Choose the correct statement about them?
 - (a) Labile complexes are formed instantly while inert complexes take hours or days in their formation
 - (b) Labile complexes take much longer time in formation than inert complexes
 - (c) Labile complexes get hydrolyzed in water immediately while inert complexes are stable in
 - (d) Labile complexes get decomposed on mild heating in aqueous solutions while inert complexes do not decompose
- 117. Indicators used in complexometric titrations are chelating agents. Choose the correct statement about

them

- (a) Indicator-metal ion complex should have higher stability than EDTA-Metal ion complex
- (b) Indicator-metal ion complex should have lower stability than EDTA-Metal ion complex
- (c) Indicator-metal ion complex should have equal stability as EDTA-Metal ion complex
- (d) Stability of the indicator-metal ion complex is not an important criterion in complexometric titrations
- **118.** In colorimetric estimation of a drug, the following sequence of reactions is carried out: treatment of the aqueous solution of the drug with sodium nitrite solution in acidic medium followed by addition of sulphamic acid and then treatment with N-(l-naphthyl) ethylene-

Face it | Fight it | Achieve it

diamine in slightly basic medium to obtain a pink colour; which is measured at a fixed wavelength to correlate the quantity of the drug with the optical density. Identify the drug under estimation

- (a) Streptomycin sulphate
- (b) Thiamine hydrochloride

(c) Dexamethasone

- (d) Sulphamethoxazole
- 119. Name the compound used for standardization of Karl-Fisher reagent in aquametry?
 - (a) Sodium tartrate dihydrate
- (b) Copper sulphate pentahydrate

(c) Sodium iodide

- (d) Sodium thiosulphate
- **120.** In the electrochemical series, the standard reduction potentials of copper and zinc are +0.337 v and -0.763 v, respectively. If the half cells of both of these metals are connected externally to each other through an circuit and a salt bridge, which one of the following processes will take place?
- (a) Zinc metal electrode will start dissolving in solution while copper ions will start depositing on the copper electrode.
 - (b) Copper metal electrode will start dissolving in solution while zinc ions will start depositing on the zinc electrode
 - (c) Both of the metal electrodes will start dissolving in the solution
 - (d) Both types of ions will start depositing on their respective electrodes
- **121.** In polarography. DME has a number of advantages. One of the advantages is that mercury has large hydrogen over potential. It means which one of the followings?
 - (a) Hydrogen ions get easily reduced on the DME
 - (b) Hydrogen gas gets easily reduced on the DME
 - (c) Hydrogen ions require high potential to be reduced at DME
 - (d) Water is difficult to get oxidized at DME
- **122.** Following are the desirable properties of the liquid phase used in GLC EXCEPT for one of the followings. Identify that.
 - (a) It should be inert to the analytes
 - (b) It should have high viscosity at operating temperature
 - (c) It should have low vapour pressure at the operating temperature
 - (d) It should have a high resolving power
- **123.** In HPLC analysis what type of column would you prefer
 - (a) A column with high HETP and high number of plates
 - (b) A column with low HETP and low number of plates
 - (c) A column with high HETP and low number of plates
 - (d) A column with low HETP and high number of plates

- 124. To synthesize sulphonyl urea antidiabetic, which of the following reactions can be used
 - (a) Reacting a suitably substituted sulphonyl chloride with a desired urea derivative under basic conditions
 - (b) Reacting a suitably substituted sulphonamide with a desired isocyanate derivative
 - (c) Reacting a suitably substituted sulphonic acid with adesired isocyanate derivative

Face it | Fight it | Achieve it

- (d) Reacting a suitably substituted sulphoxide with a desired urea derivative
- 125. In an optically active organic compound a chiral carbon has the following attached groups: using Sequence Rules choose the correct order of priority of the groups.

$$[P]$$
 $C = CH_3$ $[Q]$ $C = CH_2$ $[S]$ $C = CH_3$

Using 'Sequence Rules' choose the correct order of priority of the groups

- (a) Q>P>S>R
- (b) P>Q>R>S
- (c)0>P>R>S
- (d)P>Q>S>R

- **126.**The following statements are given:
 - [P] Conformational isomers are interconvertible by rotation around a single bond while configurational isomers cannot be interconverted without breaking a bond.
 - [Q] Configurational isomers could be optically active or optically inactive while conformational isomersare optically inactive
 - [R] Geometric isomers must have a double bond in their structures
 - [S] Geometric and optical isomers are the two distinct categories of configurational isomers. Choose the correct combination of statements.
 - (a) P. O & S are true while R is false
 - (b) P, R & S are true while Q is false
 - (c) Q, R & S are true while P is false
 - (d) P. O & R are true while S is false
- **127.** A carbocation will NOT show one of the following properties. Choose that.
 - (a) Accept an electron to give a carbene
 - (b) Eliminatea proton to afford an a1kene
 - (c) Combine with a negative ion
 - (d) Abstract a hydride ion to form an alkane
- **128.** Determine the correctness or otherwise of the following Assertion (a) And the Reason (r):

Assertion (a): Formaldehyde and benzaldehyde both undergo Cannizaro reaction while acetaldehyde and Phenyacetaldehyde undergo Aldol condensation.

Reason(r): Aldehydes can undergo both Cannizaro as well as Aldol condensation while ketones undergo only Cannizaro reaction.

- (a) Both (a) and (r) are false
- (b) (a) is true but (r) is false
- (c) (a) is fa1se but (r) is true
- (d) Both (a) and (r) are true

- 129. Choose the FALSE statement for E 2 mechanism in elimination reactions?
 - (a) These reactions are accompanied by rearrangements
 - (b) These reactions show a large hydrogen isotope effect.
 - (c) These reactions show a large element effect
 - (d) These reactions are not accompanied by hydrogen exchange

Face it | Fight it | Achieve it

- **130.**Choose the correct statement for writing the sequence of amino acids in a polypeptide?
 - (a) Amino terminal is to be written on the left hand side while the carboxyl terminal is to be written on the right hand side
 - (b) Carboxyl terminal is to be written on the left hand side while the amino terminal is to be written on the hand side
 - (c) Any of the amino acid terminals can be written on any sides but it is to be mentioned by specifying the amino terminal and the carboxyl terminal in abbreviations
 - (d) It varies from author to author how the sequence of amino acids in a polypeptide is to be written
- **131.**BETA-Carboline ring system is present in
 - (a) Emetine
- (b) Riboflavine
- (c) Deserpidine
- (d) d-Tubocurarine

- **132.**Which one of the followings is NOT a bioisosteric pair?
 - (a) Divalent ether (-0-) and amine (-NH) (b) Hydroxyl (-OH) and thiol (-OH)
 - (c) Carboxylate (CO₂-) and sulfone (SO₂)(d) Hydrogen(-H) and fluorine (-F)
- **133.** Of the four stereoisomers of chloramphenical which one is the biologically active isomer
 - (a) L-Erythro
- (b) L-Threo
- (c) D-Erythro
- (d) D-Threo
- **134.** The catalytic triad in acetyl cholinesterase is composed of which of the following amino acid residues?
 - (a) Serine, Histidine and Glutamate
- (b) Serine, Arginine and Glutamate
- (c) Threonine, Histidine and Aspartate
- (d) Threonine, Arginine and Glutamate
- **135.** Fajan's method of titrimetric analysis involves detection of the end point on the basis of which one of the

followings

(a) Colour change

- (b) Appearance of a precipitate
- (c) Neutralization reaction
- (d) Adsorption phenomenon
- **136.** Which of the following statements is true?
 - (a) Aliphatic protons have chemical shifts > 7 ppm
 - (b) Spin quantum number of proton is 1
 - (c) Chemical shift describes electronic environment of a proton
 - (d) Vicinal coupling constant is always higher than geminal coupling constant
- 137. In FT-IR instruments Michaelson interferometer is used in place of grating. The function of the interferometer is to act as a modulator'. What do you understand by this statement?
 - (a) The function of the interferometer is to act as a monochromator
 - (b) The function of the interferometer is to convert high frequency radiations into low ones
 - (c) The function of the interferometer is to convert low frequency radiations into high ones
 - (d) The function of the interferometer is to convert frequency domain spectra into time

Face it | Fight it | Achieve it

domain spectra

•
 138. Polyamine polystyrene resins belong to which category of ion-exchange resins? (a) Strongly Acidic Cation Exchange Resins (b) Strongly Basic Anion Exchange Resins (c) weakly Acidic Cation Exchange Resins (d) weakly Basic Anion Exchange Resins
139. Discrepancies in potential measurements involving factors like alkaline error and asymmetry potential are associated with which of the following electrodes?
(a) Hydrogen electrode (b) Quinhydrone electrode (c) Saturated calomel electrode (d) Glass Electrode
140. Which amongst the following auxochromes produces a shift towards higher energy wave length? (a) -CH3 (b) -NHCH3 (c) -CI (d) -C=0
141. What is the wave number equivalent of 400 nm wavelength? (a) 0.0025 cm -1 (b) 0.25 cm -1 (c) 2500 cm -1 (d) 25000 cm -1
142. Chloroform is stored in dark colored bottles because it is Oxidized in presence of light and air to a toxic compound. Identify that. (a) CH2Cl2 (b) COCl2 (c) CO (d) CCl4
143.All 0f the given compounds show $n - \pi^*$ transition. Identify which one will have the highest π max (a) Methanol (b) Methylamine (c) Methyl i0dide (d) Methyl bromide
144. Given are the four statements about NMR: [P] 13 CMR is a less sensitive technique than PMR [Q] B0th 13 C and 1 H have I=1/2 [R] Precessional frequency of the nucleus is directly proportional to the applied magnetic field [S] Deuterium exchange studies can be performed to ascertain protons attached to heteroatoms Choose the correct combination of statements. (a) P, Q & R are true while S is false (b) R, S & Q are true while P is false (c) S, P & Q are true while R is false (d) All are true
 145. Which of the following statements is WRONG? (a) The energy - required for removing an electron from a molecule varies in the given order: lone pair < conjugated n < non conjugated n < a (b) Isotopic ratio is particularly useful for the detection and estimation of number of S, CI and Br atoms in the compound in MS

(c) Neutral fragments and molecules do not get detected in the detector in MS

Face it | Fight it | Achieve it

- (d) The most intense peak in the MS is called the molecular ion peak
- **146.** Which one is an example of a bulk property detector used in HPLC?
 - (a) Fluorescence detector
 - (b) Photo diode array detector
 - (c) Refractive index detector
 - (d) UV detector
- **147.** The protons ortho to the nitro group in p-nitrotoluene are examples of which one of the Following types
 - (a) Chemically equivalent but magnetically non-equivalent protons
 - (b) Chemically and magnetically equivalent protons
 - (c) Chemically and magnetically nonequivalent protons
 - (d) Chemically nonequivalent but magnetically equivalent protons
- **148.** A 250 kg/mL solution of a drug gave an absorbance of 0.500 at 250 nm at a path length of 10 mm. what is the specific absorbance of the drug at 250 nm?
 - (a) 0.002 cm⁻¹ gm -1 1itre
- (b) 0.002 cm⁻¹ gm⁻¹ dl
- (c) 20 cm⁻¹ gm⁻¹ 1itre
- (d) 20 cm⁻¹ gm⁻¹ dl
- **149.** The peak at m/z 91in the mass spectrum for alkyl benzenes is due to which one of the followings
 - (a) Alpha fission

- (b) Retro Diels-Alder rearrangement
- (c) Mc-Laffartey rearrangement
- (d) Tropylium ion formation
- **150.** Following statements are given for a chemical reaction: Change in Gibb's free energy of the reaction has a negative value. Change in Enthalpy of the reaction has a negative value Change in Entropy of the reaction has a positive value Based on the above statements choose the correct answer.
 - (a) The reaction is spontaneous.
 - (b) The reaction is non-spontaneous.
 - (c) The reaction could either be spontaneous or non-spontaneous.
 - (d) The reaction can never be spontaneous.
