2018

PHARMACEUTICAL CHEMISTRY (Degree Standard)

Time Allowed: 3 Hours

[Maximum Marks: 300

Read the following instructions carefully before you begin to answer the questions.

IMPORTANT INSTRUCTIONS

- The applicant will be supplied with Question Booklet 15 minutes before commencement of the examination.
- This Question Booklet contains 200 questions. Prior to attempting to answer the candidates are requested to check whether all the questions are there in series and ensure there are no blank pages in the question booklet. In case any defect in the Question Paper is noticed it shall be reported to the Invigilator within first 10 minutes and get it replaced with a complete Question Booklet. If any defect is noticed in the Question Booklet after the commencement of examination it will not be replaced.
- Answer all questions. All questions carry equal marks. 3.
- You must write your Register Number in the space provided on the top right side of this page. Do not 4. write anything else on the Question Booklet.
- An answer sheet will be supplied to you, separately by the Room Invigilator to mark the answers.
- You will also encode your Question Booklet Number with Blue or Black ink Ball point pen in the space 6. provided on the side 2 of the Answer Sheet. If you do not encode properly or fail to encode the above information, action will be taken as per commission's notification.
- Each question comprises four responses (A), (B), (C) and (D). You are to select ONLY ONE correct response and mark in your Answer Sheet. In case you feel that there are more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each question. Your total marks will depend on the number of correct responses marked by you in the Answer Sheet.
- In the Answer Sheet there are four circles (A), (B), (C) and (D) against each question. To answer the 8. questions you are to mark with Blue or Black ink Ball point pen ONLY ONE circle of your choice for each question. Select one response for each question in the Question Booklet and mark in the Answer Sheet. If you mark more than one answer for one question, the answer will be treated as wrong. e.g. If for any item, (B) is the correct answer, you have to mark as follows:
 - (A) (C) (D)
- You should not remove or tear off any sheet from this Question Booklet. You are not allowed to take 9. this Question Booklet and the Answer Sheet out of the Examination Hall during the time of examination. After the examination is concluded, you must hand over your Answer Sheet to the Invigilator. You are allowed to take the Question Booklet with you only after the Examination is over.
- The sheet before the last page of the Question Booklet can be used for Rough Work. 10.
- Do not tick-mark or mark the answers in the Question Booklet. .11.
- Applicants have to write and shade the total number of answer fields left blank on the boxes provided 12. at side 2 of OMR Answer Sheet. An extra time of 5 minutes will be given to specify the number of answer fields left blank.
- Failure to comply with any of the above instructions will render you liable to such action or penalty as the Commission may decide at their discretion.

13. Ammonium carbonate is used as

- (A) Antacid
- (C) Antidote

(D) Hematinic

14. Calcium folinate is assayed by

- (A) Spectro photometry
- (C) HPTLC

(D) Spectro fluorimetry

15. Aluminium chloride is assayed by

- (A) Precipitation titration
- (B) Non-aqueous titration
- (C) Gravimetric method
- Complexometric titration

16. Potassium in oral rehydration salts is determined by

- (A) Polarimetry
- (C) HPLC

- (B) UV-Spectrometry
- Flame photometry

17. Sodium citrate is assayed by

- (A) Precipitation titration
- (C) Complexometric method
- (B) Gravimetry method
- Non-aqueous titration

18. Ferrous succinate is assayed by

Redox titration

- (C) Non-aqueous titration
- (B) Precipitation titration
- (D) Gravimetry method

19. Penicillamine is assayed by

- (A) Precipitation titration
- (C) Gravimetry method

- Non-aqueous titration
 - (D) Redox titration

| 26. | In th | e determination of magnesium sulving buffer is used? | phate b | y complexometric method, which of the |
| | (A) | Acetate buffer pH 4.0 | | |
| 4 | | Ammonia buffer pH 10.0 | | Acetate buffer pH 5.0 |
| | / 2 | | (D) . | Phosphate buffer pH 8.0 |
| JAPO | 1/18 | | | |

- 27. The molecular weight "M" of the solute can be calculated from osmatic pressure by using the formula
 - (A) $M = wRT/\pi V^2$

(B) $M = wRT^2 / \pi V$

- $M = wRT/\pi V$

(D) $M = wRT/\pi^2 V^2$

- 28. Match the following:
 - (a) Isotonic solution
- (i) Lower osmatic pressure than the other
- (b) Hypertonic solution
- (ii) Different osmatic pressure
- (c) Hypotonic solution
- (iii) Higher osmatic pressure than the other
- (iv) Same osmatic pressure
- (a) (b) (c)
 (A) (ii) (iv) (iii)
 (iv) (iii) (i)
- (C) (iii) (i) (iv) (iv)
- (D) (i) (iii) (iii)
- 29. The preparation of an optical active chiral compound form Achiral molecule under the Influence of optical active substance is known as
 - (A) Achiral synthesis

Asymmetric synthesis

(C) Retro synthesis

(D) Combinatorial synthesis

- 30. Sodium lactate is assayed by
 - (A) Non-aqueous titration
 - (C) Precipitation titration
- (3) Acid base titration
 - (D) Gravimetric method
- 31. When one of the products of a reaction itself act as a catalyst for that reaction the phenomenon is called as
 - (A) Poison catalyst

Auto catalysis

(C) Negative catalyst

(D) Positive catalyst

ህ ኒ

| 32. | Abso | lute configuration is based on | | | • | • |
|---------|--------|--|---|------|-----------------------|-----------------------|
| • | (C) | Cahn-Ingold-Prelog Rule | (B | () | Van't hoff theory | |

38. Vitamin E prevents rancidity by virtue of its — proper

Anti oxidant

(B) Oxidant

(C) Sulfuration

(D) Hydrogenation

39. Which of the following is a fat soluble vitamin?

(A) Folic acid

(B) E

(C) C

D) A

40. Which one of the following is temporary effect in the presence of an attacking reagent?

(A) Mesomeric effect

(B) Inductive effect

(0)

Electromeric effect

(D) Isomeric effect

41. Which of the following order of Electronegativity is correct?

- (A) O > N > Cl > F > Br
- (B) Br > F > Cl > N > O
- (C) C,H > Br > Cl, N > O > F
- F > O > Cl, N > Br > C, H

42. The C — H bond length decreases in the order given below

- (B) $C_{Sp} H > C_{Sp^2} H > C_{Sp^3} H$
- (C) $C_{Sp^2} \longrightarrow H > C_{Sp^3} \longrightarrow H > C_{Sp} \longrightarrow H$
- (D) $C_{Sp^3} H < C_{Sp^2} H < C_{Sp} H$

43. Which of the following is Aceto acetic ester?

- (B) $C_2H_5 COO CH_2 COO C_2H_5$
- (C) $C_2H_5 CO CH_2 COO C_2H_5$
- (D) $C_2H_5 CO CH_2 CH_2 COO C_2H_5$

| The | bonds formed by transfer of Valence ϵ | electrons | from one atom to another is ca |

50. ———— is the spiroimidazo – piperidyl derivative of rifamycin B.

(A) Ethionamide

(B) Capreomycin

(C) Rifabutin

(D) Cycloserine

51. Which one of the following compound is first generation quinolone derivative?

(A) Isoniazid

(B) Chloroquine

(C) Chloramphenicol

Nalidixic acid

52. Fill in the Elimination reaction.

$$CH_3CH_2 - OH \xrightarrow{H_2SO_4} \longrightarrow \cdots + H_2C$$

- (A) $CH_3 OH$
- (B) $CH_3 CH_2 COOH$

(D) CH₄

The basis of antibacterial action of β -lactams is that these drugs become bound to what portion of the cell wall?

(A) Penta glycine

3) Transpeptidase (PBP)

(C) Mycolic acid

(D) D - alanine - D - alanine

54. Which one of the following is classified as antifungal antibiotics?

(A) Flucytosine

(B) Sordarin

ies

Amphotericin B

(D) Resorcinol

55. The echino candins are effective systemic antifungal agents by virtue of their ability to

- (A) Block cell membrane synthesis at ergosterol level
- (B) Damage the cell membrane leading to 'leakage' of membrane

Block cell membrane synthesis at β – glucan level

(D) Interfere with zymosterol synthesis

56. ——— is a measure of how readily a compound is able to attack an electron deficient atom.

(A) Electrophilicity

Nucleophilicity

(C) Basicity

(D) Acidity

57. An electrophile is

- (B) Negative charged species
- (C) Neutral charged species
- (D) Have zero charge

58. The aromaticity of an organic compound is governed by

- (A) Martownikoff's rule
- (B) Crum Brown and Gibson's rule

(D) Hund's rule

59. Sulphonamide contain ———— functional group

(A) $NH_2 - CO - NH_2$

(B) $-SO_3H$

 $-SO_2NH_2$

(D) $N \equiv N$

60. Molecule is called as laughing gas

(A) Nitric oxide

Nitrous oxide

(C) Anaesthetic ether

(D) Cyclo propane

61. Phenobarbital is ———— acting barbiturates

(A) Ultra short

(B) Short

(C) Intermediate

Long

| | with stable isotope ^{89}K . $^{\checkmark}$ | ľ | and the land | occurs | naturany | шіхео |

(A) 38 K

(P) 40 K

(C) 37 K

(D) ³⁶K

99. Gold (198 AU) injection is used for

- (A) Diagnosis of RBC count
- Diagnosis of Blood circulation in liver
- (C) Diagnosis of Thyroid function
- (D) Treatment of Thyroid disorder

100. Which one of the following compounds is used for diagnosis of renal function

- (A) Sodium rose Bengal injection
- (B) Sodium phosphate injection
- (C) Sodium Iodide injection
- Sodium Iodotrippurate ¹³I injection

101. The time required for one half of a given number of atoms to decay is called

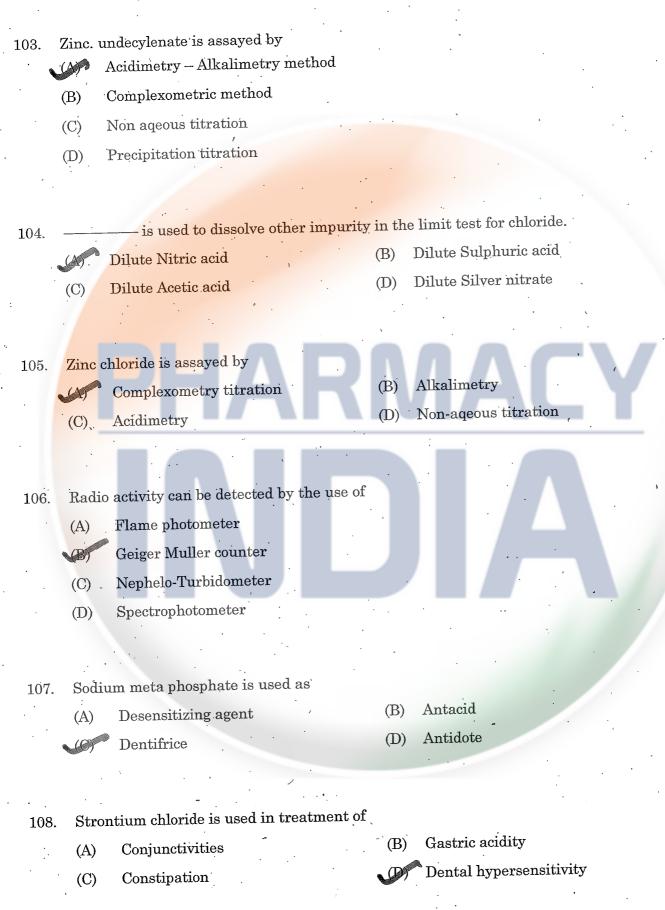

- (B) Radio activity
- (C) AUC
- (D) Elimination rate constant

102. Titanium dioxide is assayed by

- (A) Precipitation titration
- (B) Acidimetry
- Complexometric titration
- (D) Gravimetry method

JAPC/18

| 109. | | ——— can be obtained by neutraliza | tion of h | ydrochloric acid with lime. |
|----------|-------|--|------------|-------------------------------------|
| | (A) | Calcium carbonate | (B) | Calcium oxide |
| | | Calcium chloride | (D) | Calcium gluconate |

Ferrous fumarate is assayed by 116.

> Acidimetry (A)

Non-aqueous titration

Cerimetry

Precipitation titration

Sodium acetate is assayed by

- Precipitation titration (A)
- Gravimetry method

- Non-aqueous titration
 - Redox titration

Ringer's solution contains sodium chloride, potassium chloride and 118.

- Magnesium chloride
- (A)
- Ferric chloride (C)

- Calcium chloride
 - Zinc chloride

Ostwald's dilution law holds good only for 119.

weak electrolytes

all electrolytes (B)

strong electrolytes

strong acids and strong bases (D)

The Van't Hoff equation for n moles of solute dissolve in V litres of solution is 120.

 $\pi = nRT$ (A)

(B) $\pi V = nRT$

 $\pi P = nRT$ (C)

(D) $\pi P = \frac{nRT}{V}$

Insects can walk on the surface of water due to 121.

Viscosity

Refractivity (B)

Surface tension.

Optical activity

The external shape of the crystal is called

amorphous (A)

plane of symmetry (C)

- Pfeffer's method is used to determine the
 - (A) Surface tension

(B) Density

(C)Vapour pressure

- Osmotic pressure
- Which of the following is Amphiprotic solvent used in Non-Aqueous titrations?
 - Pyridine

(B) Perchloric acid

Acetic acid

- (D) Toluene
- Which of the following is a pM indicator?
 - Mordant black II

(B) Crystal violet

Starch iodide paper

- (D) Methyl orange
- Which one of the following is the correct expression of Ostwald's dilution Law?

$$K_C = \frac{\alpha^2}{(1-\alpha)V}$$

(B)
$$K_C = \frac{\alpha^2 V}{1-\alpha}$$

(C)
$$K_C = \frac{(1-\alpha)V}{\alpha^2}$$

(D)
$$K_C = \frac{(1-\alpha)}{\alpha^2}$$

Which one of the following is a mathematical expression of Raoult's law? 129.

(A)
$$\frac{P}{P - P_S} = \frac{n}{n + N}$$

$$\frac{P - P_S}{P} = \frac{n}{n + N}$$

(C)
$$(P - P_S)P = \frac{n}{n+N}$$

(D)
$$\frac{P_S - P}{P} = \frac{n + N}{n}$$

- 188. Photometric detector used in HPLC is
 - Diode array detector
 - (B) Refractive index detector
 - (C) Electrochemical detector
 - (D) Fluorescence detector
 - 189. In IR, C = O stretching absorbs at
 - (A) 1000 cm^{-1}
 - 1700 cm⁻¹
 - (C) 1200 cm^{-1}
 - (D) 1100 cm⁻¹
 - 190. In IR, C = C and C ≡ N stretching vibration are located in the range of
 - (A) $1500 1000 \text{ cm}^{-1}$
 - (B) $1000 900 \text{ cm}^{-1}$
 - 1690 1600 cm
 - (D) $1500 700 \text{ cm}^{-1}$
 - 191. The IR spectra is due to
 - Vibrational transitions
 - (B) Electronic transitions
 - (C) Rotational transitions
 - (D) Spin reversal of Nuclei

| 192. | In th an in | e titration of strong acids and strong bases by conductometric method, there is always itial ————— in conductance |
|---------|----------------|---|
| | (A) | Increase |
| ·. · | (B) | Decrease |
| | (C) | Constant |
| | (D). | Non-linear Non-linear |
| | | |
| | | |
| 193. | While | e performing radio immuno assay, the lowest concentration of a compound which can be ted in undiluted body fluid is called |
| | (A) | Quantitation limit |
| | (D) | |
| | Children . | Cut-off level |
| | (C) | Spin-off level |
| | (D) | Titre |
| | , , | |
| ľ | ٠, | |
| 194. | The n | nost vital aquipmenta aggenti Il. |
| | (A) | nost vital equipments essentially required for Radioimmuno Assay (RIA) are Emulsifier and radioactive counters |
| | (D) | |
| · | (B) | Centrifuge and separator |
| | (C) | Centrifuge and ball mill |
| | (D) | Centrifuge and radioactive counters |
| | | |
| | 1 | · · · · · · · · · · · · · · · · · · · |
| 195. | The e | lectron bombardment in mass spectroscopy with energy 10 – 15 eV usually removes |
| | | electron(s) from the molecule |
| | (A) | Three * One |
| | (C) | Four (D) Five |
| | | |
| | . , | |

| 196. | Chemical shift i | s expresséd in or | ne of the follow | wing units | OI |
|------|------------------|-------------------|------------------|------------|----|
| | | | | ~ 7.57 | |

(B) M1

(C) RPM

- (D) cm^{-1}
- 197. 12 C nucleus in NMR spectroscopy is
 - (A) Active
 - (B) Magnetically active
 - (C) Not active
 - Not magnetically active

198. Faraday cup collector is employed in

- (A) IR
 - (B) NMR
- Mass
- (D) UV

199. Using nitrogen rule, predict whether a molecule having mass number of 45 has

(A) · 4 Nitrogen

(B) 2 Nitrogen

- (C)
 - 1 Nitrogen

(D) No Nitrogen

200. The number of unsaturated centres in the molecule is calculated by

- (A) Double focussing
- Index of hydrogen deficiency
- (C) Inductive effect
- (D) Simple cleavage
